

~1st international symposium of

# Moonshot

Goal 7~

## Healthy longevity through the control of the chronic inflammation

2023 JULY 23  
SUN 9:00 - 18:30

In April 2021, AMED started a research and development project to achieve Moonshot Goal 7: "Realization of sustainable care systems to overcome major diseases by 2040, for enjoying one's life with relief and release from health concerns until 100 years old." We have held domestic symposiums in 2021 and 2022, and now we have the first international symposium. The symposium will include speakers from overseas, and all lectures and Q&A sessions will be in English (simultaneous interpretation into Japanese will be provided).

In this symposium, nine project managers (PMs) will present the current status and future prospects of the research in a session with invited speakers from overseas.
